NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA library
construction and 5'-end one pass sequencing: Institute of Medical
Science, University of Tokyo, Laboratory of Genome Structure, Human
Genome Center; 3'-end one pass sequencing: RAB; clone selection for
full insert sequencing: RAB and Helix Research Institute.

```

```
The present sequence encodes a human serpin polypeptide. Serpin is a member of the serine protease inhibitor superfamily of polypeptides.

The serpin polynucleotides and polypeptides are used to prevent, treat or ameliorate a medical conditions in e.g. humans, mice, rabbits, goats, for ameliorate a medical conditions in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or Sheep. Disorders which are diagnosed or treated include autoimmune disease e.g. rheumatoid arthritis, cardiovascular disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. nervous system disorders e.g. cardiac arrest, cerebrovascular disorders e.g. corneal infection. The polypeptides can fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to rapporting cell culture of primary tissues, to transplantation, for supporting cell culture of primary tissues, to crement a food additive or preservative to increase or decrease storage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TIGICALGATACACAGAGAGTCCACACACGTGTAAACTCCTGGGTTGCTGATAAAACTA 480

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention comprises the amino acid and coding sequences of a group c novel human serine protease inhibitors (serpins). Serpins are a superfamily of single chain proteins that contain a conserved structure of approximately 370-420 amino acids and generally range between 50 and 100 kDa in molecular mass. The majority of serpins function as protease inhibitors and so are involved in the regulation of several proteinaseactivated physiological processes (e.g. blood coagulation). The Serpin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated serine protease inhibitor polypeptide for treating, preventing and/ or prognosing cancers, inflammation, immune disorders and neurological diseases and also for testing and detection e.g. diagnosis

```
The present sequence encodes a human serpin polypeptide. Serpin is a member of the serine protease inhibitor superfamily of polypeptides. The serpin polymorlectides and polypeptides are used to prevent, treat or amaliorate a medical conditions in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, treated include autoimmune diseases e.g. rheumatoid arthritis, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        590
                                          The invention comprises the amino acid and coding sequences of a group of novel human serine protease inhibitors (serpins). Serpins are a superfamily of single chain proteins that contain a conserved structure of approximately 370-420 amino acids and generally range between 50 and 100 kDa in molecular mass. The majority of serpins function as protease activated physiological processes (e.g. blood coagulation. The Serpin DNA and amino acid sequences of the invention are useful in the treatment (e.g. gene therapy, antisense therapy) and diagnosis of conditions such as cancer, inflammation, neurological diseases and immune diseases. The present cDNA sequence represents a human serpin coding sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        170
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   230
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           290

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a human serpin polypeptide. Serpin is a member of the serine protease inhibitor superfamily of polypeptides. The serpin polymelcotides and polypeptides are used to prevent, treat or ameliorate a medical conditions in e.g. humans, mice, rabbits, goats, treated include autoimmune diseases e.g. rheumatoid arthritis, treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. receptrovascular disorders e.g. receptrovascular disorders e.g. receptrovascular disorders e.g. cardiac arrest, creebrovascular disorders e.g. corneal infection. The polypeptides and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, for supporting coll culture of primary tissues, to resentate tissues and in chemotaxis. The polypeptides can also be used additive or preservative to increase or decrease storage

The invention comprises the amino acid and coding sequences of a group of novel human serine procease inhibitors (serpins). Serpins are a superfamily of single chain proteins that contain a conserved structure of approximately 370-420 amino acids and generally range between 50 and 100 kba in molecular mass. The majority of serpins function as protease inhibitors and so are involved in the regulation of several proteinase-activated physiological processes (e.g. blood coagulation). The Serpin DNA and amino acid sequences of the invention are useful in the treatment (e.g. gene therapy, antisense therapy) and diagnosis of conditions such as cancer, inflammation, neurological diseases and immune diseases. The Isolated serine protease inhibitor polypeptide for treating, preventing and/ or prognosing cancers, inflammation, immune disorders and neurological diseases and also for testing and detection e.g. diagnosis present cDNA sequence represents a human serpin coding sequence of the Claim 1; Page 15; 288pp; English. Claim 1; Page 524-525; 672pp; English.

The invention relates to human novel polynucleotides are useful for polypeptides. The polynucleotides and polypeptides are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's treating inflammatory conditions such as arthritis, nephritis, Crohn's cand cancer and for promoting wound healing. The sequences are used to induce the proliferation of neural cells and regeneration of nerve and converted thissue, and are useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's disease, parkinson's disease, Huntington's disease and amyotrophic lateral sclerosis. The sequences are involved in chemctactic or chemokrietic activity, regulation of haematopoiesis, treatment of myeloid or lymphoid coll disorders and platelet disorders such as thrombocytopenia, calivity, issue repair, healing of burns, incisions, ulcers, treatment of growth, tissue repair, healing of burns, incisions, ulcers, treatment of disease. The sequences of the invention are also useful for gut disease. The sequences of the invention are also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues; immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis and myasthenia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polymuclectides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic

The sequence represents a DNA encoding an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor. Granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor IC, cellular tumour antigen P53, and vasocative intestinal polypeptide receptor 2. The polypeptides and their sesociated nucleic acids are useful for identification of variant sesociated nucleic acids are useful for identification of variant molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular chembritis, multiple sclerosis, cancer, sarcoidosis, nonarcoidoric pulmonary granulomatous diseases such as asbestosis and vascular including candinary granulomatous diseases such as asbestosis and vascular including candinary granulomatous diseases such as asbestosis and vascular
                                                                                                                            Angiotensin converting enzyme splice variant; ACEV; interleukin 6; granulocyte colony stimulating factor receptor; glucagon; hypertrophy; platelet-derived endothelial cell growth factor; cardiovascular disease; cellular tumour antigen PS3; cyclin-dependent kinase inhibitor 1C; ds; vasoactive intestinal polypeptide receptor 2; arteriosclerosis; cancer; myocardial infarction; coronary arterial thrombosis; renal disease; diabetic nephropathy; muscular disease; immune disorder; sarcoidosis; multiple sclerosis; immune complex nephritis; deep vein thrombosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies
                                                                                                                                                                                                                                                                                                                  nonarcoidotic pulmonary granulomatous disease; endothelial abnormality; vascular disorder; asbestosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pathologies involving an endothelial abnormality such as deep vein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB 22; Length 695;
                                                                                      DNA #75.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Khosravi R, Bernstein J;

```
eplice variant (ACEV) polypeptide. The polypeptides of the invention findlude variants of granulocyte colony stimulating factor receptor, dincarde variants of granulocyte colony stimulating factor receptor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen PS3, and wasoactive intestinal polypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such diseases such as thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, immune disorders such as immune complex nephritis, multiple sclerosis, cancer, sarcoidosis, nonarcoidotic parthylories includent as sebetosis and vascular complex parthylories.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     155

```
The sequence represents a DNA encoding an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony esimulating factor receptor.

Cinclude variants of granulocyte colony esimulating factor receptor, glucagon, interleukin 6, platelate-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen P53, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, immune disorders such as immune complex complicities, multiple seletosis, cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as such as such as such as such as such as such as such as such as such as such as such as such as such as immune complex pathologies involving an endothelial abnormality such as deep vein
multiple sclerosis; immune complex nephritis; deep vein thrombosis; nonarcoidotic pulmonary granulomatous disease; endothelial abnormality; vascular disorder; asbestosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ņ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    74
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        66
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel polynucleotide encoding thrombin inhibitor polypeptide useful for diagnosis and treatment of diseases related to thrombosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a thrombin inhibitor. This is useful for diagnosis and treatment of thrombosis, neurodegenerative diseases uch as Alzheimer's disease and Parkinson's disease, tumor metastasis, to prevent proximal extension of deep venous thrombosis or the recurrence of pulmonary embolisms and also to treat risk patients who have congestive heart failure, acute myocardial infarction or cardiomyopathy to prevent the development of deep vein thrombosis or pulmonary embolism. The thrombin inhibitor is also useful for screening chemical compounds that either up or down regulate its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TGGCACATTTGCATTAAACCTTTTGAAAAAGCTAGGGGAAAACAACTCAAACAACTTATT

The thrombin inhibitor may be used therapeutically or diagnostically to treat or prevent diseases related to thrombosis characterized by hypercoaquiation of cells. The protein may also be used to prevent extension of deep venous thrombosis of the recurrence of pulmonary embolisms and recurrence of cerebral or other systemic embolisms, to treat high risk
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Thrombin inhibitor; human; thrombolytic; cardiant; cytostatic; nootropic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      neuroprotective, antiparkisonian; gene therapy, treatment, carcinoma; cell hypercoagniation; deep venous thrombosis; pulmonary embolism; cerebral embolism; thrombic disease; tumor metastases; clot accretion; neurodegenerative disease; Alzheimer's disease; Parkinson's disease; Ss.

Datients, e.g. those who have congestive heart failure, acute myocardial infarction or cardiomyopathy to prevent the development of deep vein thromboasis or pulmonary embodism, and as long term therapy for occasional patient who has recurrent thrombosis or embolism while on the drug cumor metasteases, excrinoma of the brain, liver, lung, bone and neoplastic plasma cell carcinoma, and neurodegenerative diseases (e.g. Alzheimer's or Parkinson's disease). It can also be used against clot-bound thrombin, which produces clot accretion, for screening clot-bound thrombin, which produces clot accretion, for screening producing antibodies. The thrombin inhibitor can be used as pharmaceutical to mammals, such as humans, mice, rate; hamster, dogs, rabbits and cats. The CDNA sequences of the thrombin inhibitor may be

```
The sequence represents a DNA encoding an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, colondariants of granulocyte colony stimulating factor receptor, cyclin-dependent kinase inhibitor IC, cellular tumour antigen PS3, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment as attentions of various disorders including cardiovascular diseases such as attentions and diseases such as diabetic nephropathy, mmuscular diseases such as hypertrophy, immune disorders such as immune complex complexity, multiple selerosis, cancer, sarcoldesis, nonarcoldetic complexity.
                                                                                                                                                                                                                                                                                                                                                                                    Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               pulmonary granulomatous diseases such as asbestosis and vascular
pathologies involving an endothelial abnormality such as deep vein

```

The sequence represents a DNA encoding an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of gramulocyte colony stimularing factor receptor. Glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen P53, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant captures and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and adagnosis of various disorders innoluding cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, immune disorders such as immune complex chemicals, multiple sclerosis, cancer, sarcoidosis, nonarcoidotic pathologies involving an endothelial abnormality such as deep vein
